

Abstract

Disclosed is an aromatic polycarbonate resin composition comprising a resin component (A) selected from the group consisting of an aromatic polycarbonate and a resin mixture of an aromatic polycarbonate and at least one organic polymer resin other than an aromatic polycarbonate, wherein the resin mixture has an aromatic polycarbonate content of 50 % by weight or more, and at least one aromatic group-containing silicone compound (B), wherein the at least one aromatic group-containing silicone compound (B) comprises a monomer, a polymer or a mixture thereof, which is represented by at least one formula selected from the group consisting of the following formulae (1) and (2):

and

wherein the component (B) contains the aromatic group in an amount of 5 to 100 mole %, based on the total molar amount of  $R^1$ ,  $R^2$ ,  $R^3$  and  $R^4$ , wherein each of  $R^1$  and  $R^2$  represents a hydrogen atom or a  $C_1$ - $C_{20}$  hydrocarbon group, and each of  $R^3$  and  $R^4$  represents a hydrogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group or a metal-containing group.
